27		<b>NOTES :</b>																									
28		1. Vendor shall complete this Datasheet and validate/verify/complete all materials, dimensions and sizes against the fluid characteristics. It shall be submitted																									
29		as part of the Vendor bid.																									
30		2. This data sheet shall be read in conjunction with the PID (CMIT-240048-728-PCS-15.11-0016) . The Pump Scope of Supply shall be as specified (battery limits) in the relevant PID.																									
31		3. For Detailed Medium Properties information, please refer to the Material and Heat Mass Balance PFD (CMIT-240048-728-PCS-15.01-0002).																									
32		4. The pump (including motor and auxiliaries (excluding mechanical seal, wear rings, shaft sleeve, gasket, shim and O-rings)) shall be designed and constructed for																									
33		a minimum service life of 25 years and at least 3 years of continuous (uninterrupted) operation.																									
34		5. The Preferred Operating Region shall be within 70% to 120% of Pump's BE Flow-rate. The Rated Flow shall be within the region of 80% to 110% of the Pump's Best																									
35		Efficiency Flow-rate as furnished.																									
36		6. For Parallel operation, Head Rise from Rated Point to Shutoff shall be ≥10%.																									
37		7. The Vendor shall furnish the Performance Curve for the Pumps with the Duty Point, Power Absorbed, Efficiency, and NPSH Required marked along with the Bid.																									
38		Moreover, the Vendor shall provide a similar and discrete Performance Curve for numerous pumps' operation modes (parallel or series).																									
39		8. The Casing and Impeller types shall be selected by the Vendor based on the Fluid Properties and the targeted Operating and Design Parameters.																									
40		9. The Vendor shall select and confirm the Mechanical Seal Type and Flushing Plan suitable for the Pumping Fluid to comply with API 682-specific requirements.																									
41		10. All necessary Power/Control Panels, Instruments, Cabling, and Junction Boxes shall be supplied by the Vendor.																									
42		11. The Pump's Coating shall meet the requirements of Local Ambient Conditions such as Ultraviolet Radiation and Sandstorm. The Vendor shall select a Coating of high quality.																									
43		12. The Baseplate Rim/Pan shall be sloped at least 1:120 toward the Pump's End and equipped with a Tapped Drain Opening ≥ 2 NPS.																									
44		13. The Baseplate shall be extended under the Pump, Drive Train Components, all Pipe Joints, and Pipe Flange Faces (including Pump Suction and Discharge Flanges)																									
45		where all shall be within the Drain Pan/Rim Collection Area.																									
46		14. Mounting Pads shall be provided for the Pump and all Drive Train Components.																									
47		15. The Baseplate shall be equipped with Lifting Lugs for at least a four-point lift. Lifting the Baseplate, complete with all equipment mounted, shall not permanently distort or otherwise																									
48		damage the Baseplate or the Machinery mounted on it.																									
49		16. The Vendor (Manufacturer) shall guarantee the material of the Pump can meet the requirements for anticorrosion following API610/MR0175. All Pump Materials																									
50		(including the Coupling Guard) shall be Non-Spark.																									
51		17. As a minimum, 1m shall be kept as NPSH Margin (difference between the NPSH3 and the determined NPSH <sub>d</sub> ). The NPSH3, specified by the Vendor,																									
52		shall be based on water (at a Temperature <55 °C) at Rated Flow and Rated speed.																									
53		18. The Rated Impeller Diameter shall be ≤ 95% of the Maximum Impeller Size possible for the Pump's Casing.																									
54		19. All Shafts shall be of Forged Material. Rotors/Coupling shall dynamically be balanced to ISO G2.5 quality.																									
55		20. Auxiliary Connections to the Pressure Casing, except the Seal Gland, shall be Socket-Welded, Butt-Welded, or Integrally-Flanged.																									
56		21. Design and Supply of the Anchor Bolts and Levelling Screws shall be in the Vendor's Scope of Supply.																									
57		22. The Bolts/Nuts shall be coated with Anti-Rust Approved Materials. The Bolts/Nuts for Internal Parts shall be of Anti-Corrosive Materials. The Bolting for Pressure Casings shall																									
58		conform to API 610-specific requirements.																									
59		23. The Pump Shutoff Pressure at the Rated Impeller Diameter shall not exceed the downstream System Design Pressure considering Maximum Suction Pressure, Maximum Density,																									
60		Operation up to Trip Speed, and all applicable tolerances.																									
61		24. All Pressure Parts shall be provided with Material Certificates conforming to BS EN10204-type 3.1.																									
62		25. All fabricated joints in the Seal System Piping shall be Full Penetration Butt Welded and the Weld Root shall be made by GTAW Welding.

## DATA SHEET FOR BOOSTER PUMP (P-282221A/B/C)

Owner Doc.No.	CMIT-240048-728-ROT-15.17-0001	
Job's Doc. No.	253001D0728ME00D01	
Phase	Detailed Design	
Rev	C	Page 7 of 7

1	Note	Rev
2	26. Noise Level (Sound Pressure Level (Lp)) shall be $\leq 85$ dBA @ 1m distance from the Equipment's (Driver + Driven Equipment Train) surface at all directions.	
3	Acoustic hoods shall be provided, if necessary to meet the Noise Level's requirements.	
4	27. The number of Vibration Probes and Temperature Detectors requirements will depend on the Equipment and the selected Bearings as it shall be finalized by the Vendor.	
5	The Monitors with the Connecting Cables to the Probes and Detectors shall be supplied by the Vendor per API670.	
6	28. Suction/Discharge Mating Flanges' along with Bolts/Nuts and Gasket to be supplied by the Vendor.	
7	29. The Vendor shall supply all Tools, Accessories, and Consumables required for the Skid Installation, Commissioning, Test-run, and 3 months of Operation.	
8	Also, the Vendor shall supply the Commissioning and 2-Year Spare Parts.	
9	30. All required Interconnecting Piping and Cabling between the Main Pump Skid and accessory Equipment Skids shall be supplied by the Pump's Vendor.	
10	31. All Witnessed Inspections and Tests are Hold Points. Purchaser prefer not to have Preliminary Tests prior to Witnessed Tests to understand any difficulties encountered during testing.	
11		
12	32. The need for the Casing Disassembly after the Final Performance Test shall be judged by the Vendor or if any abnormal observations existed during the Test.	
13	33. Hardness Test of Parts, Welds, and Heat Affected Zones shall be performed by the Vendor.	
14	34. 100% Dye Penetration Test and 100% Radiographic Examination shall be performed for all Butt-Welded Joints.	
15	35. A Minimum of 3mm shall be considered as Corrosion Allowance for the Pump's Casing. However, the Vendor is allowed to propose an alternative CA value, including zero value, provided that the selected Material of Construction fulfills the service life requirements set in point (4) above and without affecting the pumps'safety or reliability.
